‘HUMANIZING’ DISABILITY LAW: CITIZEN PARTICIPATION IN THE DEVELOPMENT OF ACCESSIBILITY REGULATIONS IN CANADA

by **Laverne JACOBS**, Associate Professor, Faculty of Law,
University of Windsor Canada.

« We are hoping that through discussions, through dialogue, through comments we’ve received from the general public, we can come to a more general agreement of what everyone sees as the best interest of Manitoba »¹

Consultation is becoming increasingly popular among the federal, provincial and territorial governments of Canada.² This paper examines one of the most recent and widespread cases of consultation to occur in the development of lawmaking in Canada: citizen participation in the enactment of accessibility standards for persons with disabilities.

The first attempt at legislation designed to enable this form of participatory governance came about with the *Ontarians with Disabilities Act, 2001* (ODA).³ Systematic discontent and a grassroots movement by the disability community eventually led to the development of legislation with more enforcement potential – namely, the *Accessibility for Ontarians with Disabilities Act, 2005* (AODA).⁴ Both statutes, but especially the AODA, show a radical shift in the process of developing laws in terms of incorporating citizen participation. Under the AODA, regulations are finalized by the responsible Minister and enacted by the Lieutenant Governor in Council after the content of those regulations have been agreed upon and put forward by committees comprised of persons with disabilities, industry,

¹ Member of the head table hosting the Manitoba Customer Service Standard Public Consultation-June 17, 2014 (Winnipeg, Manitoba).

² Canada’s 2007 *Cabinet Directive on Streamlining Regulation* (available online at: <http://publications.gc.ca/collections/Collection/BT22-110-2007E.pdf>), specifies that federal regulations will be made in an inclusive and transparent manner and that all departments and agencies are responsible for ensuring that there are “open, meaningful, and balanced consultations at all stages of the regulatory process”. The federal government currently runs a consultation website where the public can learn of the consultations taking place: <http://www1.canada.ca/consultingcanadians/>. Some provinces run similar websites – see, for example, the province of Ontario’s *Consultations Directory* website: <https://www.ontario.ca/page/consultations-directory>.

³SO 2001, CHAPTER 32 [ODA].

⁴ *Accessibility for Ontarians with Disabilities Act, 2005*, SO 2005, CHAPTER 11. [AODA]. Though there are indications that an earlier and much less widespread instance of using consultation to develop standards existed several decades earlier in Toronto municipal government. (Interview with a former public servant of Toronto municipal government, notes on file with author.)

government and other affected stakeholders. The legislation therefore adds a new dynamic to the creation of regulations in Canada. The degree of citizen participation is much more extensive, more formal, and lengthier than what is typically used for the development of regulations.⁵

More importantly, this new form of consultation process seeks to bring together opposing views in a deliberative democratic battleground with the reality of regulations built on consensus or compromise. In addition to the two Ontario statutes noted above, accessibility standards legislation has now also been enacted in the province of Manitoba.⁶

The new consultation model was prompted by dissatisfaction with the existing approach to remedying disability discrimination. Prior to the enactment of the ODA and the AODA, individuals who suffered disability discrimination had, as their only source of redress, the option of filing a complaint before an administrative body or a court.⁷ With respect to administrative bodies, human rights commissions and tribunals exist in every province and territory and at the federal level. The aim of these statutory administrative bodies is to achieve transformative change in society by remedying disputes in which discrimination has been alleged. Statutory human rights bodies fit within a swath of administrative actors in Canada that can be described as reactive regulatory bodies.

I use the term reactive regulation to represent the idea that regulation by these administrative actors is triggered only in response to a complaint by an aggrieved party. These bodies are not inquisitorial or investigative. They do not rely on the initiative of the administrative actor to initiate a search for wrongs and to remedy them. More importantly, they are also not forward-looking beyond the parties in the dispute. For example, a human rights commission or tribunal may provide systemic remedies when a workplace has been found to have violated the right to be free of discrimination. In such a case, the systemic remedy may involve training at the workplace about discrimination and a requirement that the training be ongoing over a period of time. However, although the remedy is systemic (in that it aims to address an underlying repeated behaviour of discrimination in the

⁵ France Houle, *Analyses d'impact et consultations réglementaires au Canada* (Éditions Yvon Blais, 2012).

⁶ *Accessibility for Manitobans Act*, CCSM c A1.7. [AMA]. The first standard (*Customer Service Standard Regulation*, Regulation 171/2015) came into effect on November 1, 2015. The Accessible Employment Standard Development Committee met between October, 2015 and March, 2016 to prepare the draft of the second standard under the AMA.

⁷ The constitutional and statutory legal tools protecting human rights and freedoms in Canada, including equality rights for persons with disabilities include the Canadian *Charter of Rights and Freedoms* (Part I of the *Constitution Act*, 1982, being Schedule B to the *Canada Act 1982* (UK), 1982, c 11. [*Charter*]) and statutory human rights codes. The UN *Convention on the Rights of Persons with Disabilities*, (13 December 2006, United Nations, *Treaty Series*, vol. 2515, p. 3; online: <http://www.un.org/disabilities/convention/conventionfull.shtml>) has also been signed and ratified by Canada and is said to be reflected in many of the laws already existing. A concise overview of these laws as they relate to persons with disabilities may be found in *Second Legislative Review of the Accessibility for Ontarians with Disabilities Act, 2005* at 4-8 (Mayo Moran, Reviewer) (Queen's Printer for Ontario: 2014). [Moran Review]

workplace) and forward-looking (in that it takes place over time and hopes to prevent future occurrences), it is rooted in the unique circumstances of the conflict that prompted the human rights commission or tribunal's involvement.

It is also confined to the workplace where the incident occurred. In other words, reactive regulation, as established by the statutes enabling human rights bodies in Canada, provide remedies only in discrete situations, as opposed to setting blanket standards.⁸

In addition to the limited remedial scope, members of the disability community were also concerned about the costs of bringing complaints over disability discrimination within the human rights system.

In some instances, human rights statutes do not allow for the complainants to be awarded the costs of their litigation.⁹ Moreover, persons with disabilities often live below the poverty line.¹⁰ The cost of litigation can be quite high and therefore out of reach for many persons with disabilities. Finally, many of the complaints that are brought through the reactive human rights process are settled due to an emphasis on alternative dispute resolution, particularly mediation, that has blossomed in the past two decades.¹¹

Mediated files result in settlements that are generally sealed. This means that the resolution may not be known beyond the parties and certainly cannot be used as precedent in later similar cases. In short, despite the existence of human rights codes and the administrative actors mandated to implement them, their impact on persons with disabilities was not significant. This is because of inherent barriers posed by the remedial nature of the system, costs, and the increase of closed mediated settlements.

As mentioned earlier, in Canada, it is also possible to file an action in court under the *Canadian Charter of Rights and Freedoms* (*Charter*) for disability discrimination.¹² In such cases, a remedy is sought against the government (actions against private parties for human rights violations are not possible under the *Charter*), and under the equality section, which provides for freedom from discrimination.¹³ Concerns about the limited scope of remedies,

⁸ But, note that even if the goal of accessibility standards is to provide blanket minimum protection from equality infringing activity, those who are bound by the standard have an obligation to provide the highest level of human rights protection in the province (See eg AODA, *supra*, at § 38). This may mean accommodating individuals with disabilities to the point of undue hardship, which is the standard under Canadian statutory human rights law. For an interesting account of discontent and confusion caused by the existence of two contemporaneous equality rights instruments see Moran Review *id.* at 51-53.

⁹ See *Canada (Canadian Human Rights Commission) v Canada (Attorney General)* 2011 SCC 53 (*Mowat*) which held that courts and tribunals should strictly interpret legislative wording allowing for the awarding of costs.

¹³ *Id.* at § 15.

costs and alternative dispute resolution exist equally with respect to the *Charter*. There is also an additional concern over past governmental delay in implementing *Charter* remedies to rectify disability discrimination.¹⁴

Persons with disabilities therefore sought a new method through which the eradication of disability discrimination and the concomitant goal of social transformation could be achieved. In contrast to the complaint-triggered human rights system, regulations setting standards of accessibility were seen as a desirable complementary tool to assist in lowering instances of disability discrimination and developing a society that is more inclusive of persons with disabilities.

I use the term *proactive regulation* to describe this approach as it aims to break down discriminatory barriers before individuals suffer discrimination. In this way, the proactive regulatory system skirts the need for at least a portion of disability discrimination claims to be brought to human rights agencies and the courts.

One question that arises with the new proactive regulatory system is how well it works – both from a perspective based on regulatory theory and from the perspectives of persons with disabilities and others whom the change affects. In this paper, I seek to address only the first question.¹⁵ In order to examine the efficacy and shortfalls of the proactive regulatory system, I analyze the legislation and consultation processes of the standard-setting regulations through the framework of Cass Sunstein's *Valuing Life: Humanizing the Regulatory State*¹⁶.

In Part I of the article, I present a detailed and comparative description of the statutes in Canada that provide for citizen participation in the development of disability access standards. In Part II, I set out Sunstein's framework of analysis for humanizing the regulatory state.

Then, using empirical examples primarily drawn from Manitoba's consultations during the development of its customer service standard, I apply the analysis to demonstrate that the Canadian regulatory legislation and consultative processes succeed, to varying degrees, in: i) capturing qualitatively diverse goods and promoting sensible trade-offs among them, ii) taking account of values that are difficult or impossible to quantify, and iii) attempting to benefit from the dispersed information of a wide variety of human beings. The legislative wording and consultation documents reveal that there may be room for intuition rather than a disciplined analysis to inform the ultimate development of the regulations. I argue, however, that any unclear aspects of the legislation can and should be clarified through further

¹⁴ In particular, the federal government delayed considerably in implementing mandatory interpreter services for the Deaf despite a Supreme Court of Canada decision requiring that this be done. consultative dialogue rather than analysis based on monetary valuation.

§1 – ACCESSIBILITY STANDARDS LEGISLATION IN CANADA – COMPARATIVE OVERVIEW

Canadian federalism divides legislative jurisdiction between the federal government and the provinces. The provincial governments that have decided to enact disability access legislation have chosen to address accessibility barriers in areas that fall within the provincial legislative authority of the Constitution. These areas are: customer service, employment, information and communication, and the built environment. The current legislation aims to counteract attitudinal barriers as well, such as stigmas surrounding mental illness.

In addition to Ontario and Manitoba, which have already enacted accessibility standards legislation, the province of Nova Scotia has presented plans to create a similar law.¹⁷ British Columbia has adopted an inclusive approach to improving accessibility in the province, which involves engaging citizens in disability related policy discussions.¹⁸

The province has also committed to considering options for a “made-in-B.C.” approach to accessibility-related legislation.¹⁹ Even more recently, there has been literature from the federal government indicating that it will enact a federal statute to be called the *Canadians with Disabilities Act*.²⁰ Although the precise issues that the federal statute will address have not yet been revealed, given the nature of Canadian federalism, the statute could serve to support initiatives taken by the provinces or address slightly different concerns such as employment of federal employees, trans-provincial transportation, and health care.

This Part of the article first presents a comparative overview of the two Ontario statutes—the ODA and the AODA, and then a comparison between those statutes and the accessibility legislation

¹⁷ With respect to Nova Scotia, the Minister of Community Services’ Advisory Panel on Accessibility Legislation was established on June 24, 2014. Its report and recommendations for accessibility legislation were published in 2015. See: *Access and Fairness for All Nova Scotians: The Minister’s Advisory Panel on Accessibility Legislation. Report and Recommendations*, (2015)

http://novascotia.ca/coms/accessibility/docs/Accessibility-Leg_Eng_Accessible.pdf.

http://www2.gov.bc.ca/assets/gov/government/about-the-bc-government/accessible-bc/accessibility-2024/docs/accessibility2024_update_web.pdf.

²⁰ Shortly after being elected to office in October, 2015, Prime Minister Justin Trudeau stated that one of the “top priorities” of the newly established Minister of Sport and Persons with Disabilities would be to “lead an engagement process with provinces, territories, municipalities, and stakeholders that will lead to the passage of a *Canadians with Disabilities Act*”. See Prime Minister of Canada, *Minister of Sport and Persons with Disabilities Mandate Letter* (letter to Minister Carla Qualtrough) (2015) <http://pm.gc.ca/eng/minister-sport-and-persons-disabilities-mandate-letter#sthash.ZH3rG4cy.dpuf>. Consultations on the *Canadians with Disabilities Act* are scheduled to take place between July, 2016 and February, 2017; see:

<http://www.esdc.gc.ca/en/consultations/disability/legislation/index.page>

in Manitoba, *The Accessibility for Manitobans Act* (AMA)²¹. The purpose of this Part of the article is to provide background on the issues addressed by existing Canadian accessibility legislation and the means by which it contemplates citizen participation. For each statute, background information is first provided, including any unique historical information about the Act. A discussion of the purpose of the statute, its guiding principles and its underlying values then follows. This is rounded out by a sketch of the nature of the obligations set out by the statute, as well as an examination of both the duty to consult with persons with disabilities and the nature of the consultation process established under the statute.

A) ONTARIO

1) *Ontarians with Disabilities Act, 2001 (ODA)*

This section presents an analysis of the *Ontarians with Disabilities Act, 2001* (ODA) as it existed between its enactment on December 14, 2001 and December 1, 2015. During that time, only one section was modified: the provision establishing offences under the Act and prescribing monetary penalties was repealed. Interestingly, this provision was repealed before it was even brought into effect, reinforcing the commonly held perception that the statute had very weak enforcement teeth.²² On December 1, 2015, a number of additional provisions were repealed.²³ These sections of the ODA were deemed to be redundant once the AODA came into effect in 2005. They were not repealed immediately, though, due to a sentiment that it would be wisest to wait until the AODA's standards had been firmly put in place before repealing seemingly duplicative legislative provisions. Today, many of the provisions no longer exist but it is useful to have knowledge of them in order to have a historical and complete understanding of citizen participation in the enactment of disability access legislation.

a) *Purpose, Guiding Principles and Underlying Values of the Statute*

The *Ontarians with Disabilities Act, 2001* (ODA) opens with a lengthy preamble that is not found in the later Ontario accessibility statute. As with most legislation, the preamble is suggestive, providing baseline principles for understanding and interpreting the rest of the statute. The ODA's preamble begins by emphasizing the nature of the equality rights that it seeks to promote: the rights of persons with disabilities to equal

²¹ CCSM c. A1.7 (2013).

²² ODA, *supra*, § 21 was repealed on December 31, 2011.

²³ *Id.* § 3, 5, 6, 7, 10, 11, 12, 13, 16, 18, 20 and 22 were repealed (see SO, 2005, c 11, § 42).

opportunity and full participation within the life of the province of Ontario.

Barriers experienced by people with disabilities in Ontario are also acknowledged in the preamble. The preamble affirms that persons with disabilities experience barriers and recognizes that the number of persons with disabilities “is expected to increase as the population ages.”²⁴ The connection between aging and disability has been highlighted consistently since the province began developing accessibility standards.²⁵

There is only one strong and clear statement of the government of Ontario’s commitment to improving the situation of persons with disabilities in the preamble. The rest of the preamble is supportive of this statement which asserts that the Government of Ontario is committed to moving towards “a province in which no new barriers are created and existing ones are removed”²⁶. In order to reach this goal, the Government will work with every sector of society to build on what has already been achieved. Moreover, the preamble indicates that the government views the goal of removing existing barriers and avoiding the perpetuation of new ones as a widely shared responsibility among all geographic regions, institutions, and individuals in the province. It is a responsibility that “rests with every social and economic sector, every region, every government, every organization, institution and association, and every person in Ontario”.²⁷

An unusual aspect of the preamble, not evident in the other Canadian provincial legislation on disability access, is its emphasis on the Government’s own past leadership. The preamble contains a list of six Ontario statutes, which, it boasts, have already been designed or amended to further the equality rights of persons with disabilities, and the preamble indicates that no rights that have been granted to persons with disabilities under other statutes or regulations are to be diminished in any way by the ODA.²⁸ Finally, the preamble asserts the government’s support for other jurisdictions in Canada to identify, remove and prevent barriers to persons with disabilities.

The underlying philosophy of the legislation rests on the idea of bringing persons with disabilities into the public policy realm to discuss the barriers that need to be addressed. This philosophy becomes evident when one reads the purpose statement of the ODA which indicates that “the purpose of this Act is to improve opportunities for persons with disabilities and to provide for their

²⁴ ODA, *supra*, at Preamble.

involvement in the identification, removal and prevention of barriers to their full participation in the life of the province”.²⁹ This purpose statement brings together the ideas of the preamble.

b) Obligations and Consultation under the ODA

i. Obligations

The bulk of the ODA, as it existed until 2015, set out the access obligations of the various levels of government. In doing so, it also identified the instances in which government must consult with persons with disabilities and prescribed how the consultations must be completed. In comparison to the statutes later enacted, the duty to consult is limited and the guidance provided minimal.

Obligations were owed by three sectors of the provincial government: the Government of Ontario itself, municipalities and “other organizations, agencies and persons” (which included organizations that provide transportation to the public, educational institutions, hospitals and prescribed administrative agencies).³⁰ In all cases, the nature of the obligation was to provide accessibility but the essence of the obligation and the manner in which the obligation was to be carried out varied depending on the subject matter. For example, the Government of Ontario was responsible for ensuring accessibility with respect to the built environment (buildings, structures and premises), goods and services, Internet sites, employees, capital programs and accessibility plans within all government ministries.³¹ In relation to the built environment, the government’s obligation was to ensure that *guidelines* were created in order to provide barrier-free access to buildings, structures and premises.³²

The guidelines were created in consultation with persons with disabilities and others. The guidelines had to ensure that the level of accessibility was at least the same as what was provided under the province’s *Building Code*. The ODA allowed the government to set up a time frame by which the building etc. must meet the guidelines, although it did not set out any sanction for failure to comply. There was therefore a very detailed set of steps that formed the collection of the Government’s obligations. By contrast, when it came to the purchase of goods and services, the government was simply obligated to “have regard to the

²⁹ *Id.* at § 1.

³⁰ *Id.* at § 2 and §§ 14-16.

³¹ *Id.* §§ 4-10. Some of these provisions have now been repealed. See *supra* note 23 and accompanying text.

³² See ODA § 4. The provision indicates that the barrier-free design guidelines must be created for buildings that the Government of Ontario has purchased, leased, or significantly renovated. A common criticism of the ODA, and later, the AODA, is that there is no obligation on the government to retrofit buildings to ensure their accessibility. See also P Gordon et al, *An Analysis of the ‘Ontarians with Disabilities Act, 2001,’* 24-25 (2002) 17 *Journal of Law and Social Policy* 15 [Gordon] at 24-25.

accessibility for persons with disabilities to the goods or services.”³³ Unlike its responsibilities with respect to the built environment, there was no duty to consult with persons with disabilities, to set guidelines, etc. One sees a similar pattern within the other two government sectors.

ii. The Duty to Consult with Persons with Disabilities

The words “consult” or “consultation” come up only 10 times in the ODA as it existed between 2001-2015, which is rather surprising in light of the proactive orientation of the statute reflected in its purpose statement. Many have criticized the ODA for not having sufficient enforcement teeth.³⁴ In my opinion, the Act may also be criticized for failing to provide a significant number of consultation opportunities. Moreover, the consultation opportunities that were available provided inconsistent levels of engagement with the disability community, suggesting reticence on the part of the legislature to fully engage in citizen participation. Much fuller opportunities for consultation appear later in the AODA as well as in Manitoba’s AMA.

The consultation opportunities designed by the ODA can be classified into four categories. These categories represent situations in which the government sector was obliged to participate in: i) direct consultation, ii) indirect consultation, iii) no consultation or iv) consultation on direction or through request. Direct consultation refers to instances where a government sector must consult with persons with disabilities under the Act in order to complete the statutorily required accessibility task. The Government of Ontario’s responsibility to develop barrier-free design guidelines for buildings, structures and premises, discussed above, provides an illustration. The relevant ODA provision reads :

« 4. (1) In consultation with persons with disabilities and others, the Government of Ontario shall develop barrier-free design guidelines to promote accessibility for persons with disabilities to buildings, structures and premises, or parts of buildings, structures and premises, that the Government purchases, enters into a lease for, constructs or significantly renovates after this section comes into force. »³⁵

In keeping with the rest of the statute, there is no administrative sanction or means for redress if this consultation does not take place. There are four occurrences of direct consultation under the Act. Outside of barrier-free design guidelines for ‘buildings, structures and premises’, public transportation organizations, educational institutions

³³ ODA, *supra*, at § 5 (repealed).

³⁴ See Gordon *id.* and D Lepofsky, *The Long, Arduous Road to a Barrier-Free Ontario for People with Disabilities: The History of the ‘Ontarians with Disabilities Act’ – The First Chapter* (2004) 15 Nat’l J. Const. L., 125. [Lepofsky, “Arduous”]

³⁵ ODA, *supra*, at § 4(1).

and hospitals were required to consult directly with persons with disabilities and others in preparing an accessibility plan.

Indirect consultation denotes circumstances where the Act requires the government sector to consult with a committee or other body established to represent the interests of persons with disabilities. For example, every government ministry was required to consult with the Accessibility Directorate of Ontario while creating its annual accessibility plan.³⁶ The Accessibility Directorate of Ontario is an office of civil servants established by legislation to support the administration of the statute under the direction of the responsible minister.³⁷

There is no requirement that persons with disabilities be among the employees appointed to this office. Indirect consultation may also signify an obligation imposed on the government sector to consult with persons with disabilities because a representative committee has not been established under the Act for legitimate reason. For example, in preparing its annual accessibility plan, every municipal council was required to seek the advice of the municipality's accessibility advisory committee. However, municipalities were exempt from establishing accessibility advisory committees if they had a population of less than 10,000 people.³⁸ In such cases, a municipality without an accessibility advisory committee would be required by default to consult with persons with disabilities directly.³⁹

In many instances, no consultation was required. For example, the Government of Ontario could make decisions respecting the purchase of goods or services without having to consult with persons with disabilities or a representative committee. The government was required only to "have regard" to access for persons with disabilities in relation to the goods and services procured. Moving even further along the spectrum of consultation, it was possible for a government sector to avoid providing access in certain cases such as where it determined that it was not technically feasible to create accessible Internet sites.⁴⁰

Finally, with respect to consultation on direction or through request, situations existed under the statute where consultation would take place only on direction of the responsible minister. For example, at his or her discretion, the Minister could instruct the Accessibility Directorate to consult with persons with disabilities in order to develop codes, standards, guidelines etc.⁴¹ One final situation in which a similarly weak form of consultation would take place was when a person with a disability *requested* access, obliging the government sector to consider the request. There was only one instance of this type of

³⁶ *Id.* § 10(1)(b) (provision now repealed).

³⁷ *Id.* § 20 (repealed). The Accessibility Directorate of Ontario has been continued under AODA, *supra*, at § 32.

³⁸ *Id.* § 12 (repealed).

³⁹ *Id.* § 11(1)(b) (repealed).

⁴⁰ *Id.* § 12(repealed).

⁴¹ *Id.* § 20(1)(f)(repealed). This section also provided that, in addition to consulting with persons with disabilities, the Accessibility Directorate of Ontario could also be directed by the Minister to consult with the Accessibility Advisory Council of Ontario. [This Council was established and defined by the now repealed §19].

circumstance in the statute. It dealt with government publications and obliged the Ontario government to make publications available in a format accessible to the person who made the request unless it was not technically feasible to do so.⁴²

In conclusion, the underlying philosophy of the ODA is to bring persons with disabilities into decision-making processes for the creation of guidelines etc. on accessibility. The statute aims, ultimately, to concretize the equality rights guaranteed under the human rights statutes of each province and territory and the constitutional right to equality for persons with disabilities. However, the obligations imposed on the government vary according to the circumstance.

Moreover, the right to consultation itself comprises four categories on a spectrum with only a few instances of direct consultation with persons with disabilities themselves. There was also no enforcement mechanism under the ODA to ensure that government complied with the outcomes (whether they be accessibility guidelines, plans, or barrier-free design) once they had been established. Some of these issues were addressed by another Ontario statute developed later and which will be discussed next, the *Accessibility for Ontarians with Disabilities Act, 2005* (AODA).

2) The Accessibility for Ontarians with Disabilities Act, 2005 (AODA)

Four years after the ODA was enacted, the *Accessibility for Ontarians with Disabilities Act, 2005* (AODA) received royal assent. The AODA provides stronger tools than the ODA for enforcing the obligations it sets out. It also places obligations on for-profit businesses and organizations — a move that is more in keeping with the statutory human rights codes. The human rights codes apply in both the public and private sectors. Surprisingly, the AODA was passed during the term of the conservative government as opposed to the earlier statute which had been passed by the more progressive New Democratic Party.

a) Purpose, Guiding Principles and Underlying Values of the Statute

Similar to the ODA, the AODA shares an underlying philosophy of engaging citizens in the development of laws, policies and programs that affect them. There is no distinct preamble in the statute. Instead, there is a short and precise statement of purpose that recognizes the “history of discrimination against persons with disabilities in Ontario”.⁴³ The statement specifies further that the purpose of the statute “is to benefit all Ontarians” through the development, implementation and enforcement of accessibility standards, and to involve persons with disabilities,

⁴² *Id.* § 7(repealed).

⁴³ *Accessibility for Ontarians with Disabilities Act, 2005*, § 1, SO 2005, chapter 11. [AODA]

government and industry in the process of developing the standards. It is worth setting out the purpose statement in full. It lays the foundation and underlying theory for: the statute, the terms of reference for the standard development committees and other committees, and all other regulations and delegated legislation authorized by the statute. The purpose statement reads :

« Purpose

1. Recognizing the history of discrimination against persons with disabilities in Ontario, the purpose of this Act is to benefit all Ontarians by, (a) developing, implementing and enforcing accessibility standards in order to achieve accessibility for Ontarians with disabilities with respect to goods, services, facilities, accommodation, employment, buildings, structures and premises on or before January 1, 2025; and (b) providing for the involvement of persons with disabilities, of the Government of Ontario and of representatives of industries and of various sectors of the economy in the development of the accessibility standards. »⁴⁴

“Accessibility standards” are a central tool in this legislation. They are legal instruments designed to set out measures, policies, practices, etc. for the eradication and prevention of barriers affecting persons with disabilities in prescribed areas of society.⁴⁵ The social areas that are prescribed in the statute mirror the areas of protection in the Ontario *Human Rights Code*.⁴⁶ They are: goods, services, facilities, accommodation, employment, buildings, structures and premises. However, the AODA offers the opportunity for additional social areas to be identified and protected as well, by indicating that “such other things as may be prescribed” may also be the subject of accessibility standards.⁴⁷

Like accessibility standards, barriers are also at the heart of the legislation. Under the AODA, a “barrier” means anything that prevents a person with a disability from fully participating in all aspects of society because of their disability, including a physical barrier, an architectural barrier, an information or communication barrier, an attitudinal barrier, a technological barrier, a policy or a practice.⁴⁸ Barriers have wide-reaching scope, and their removal aims to facilitate social inclusion. Although the concept of a “barrier” had been mentioned in the earlier ODA, it is developed in detail for the first time in the AODA. The AODA highlights the concept of widespread and enforceable barrier removal for the first time in the legislative sphere of laws affecting persons with disabilities in Ontario.

b) Obligations and Consultation under the AODA

i) Obligations

Obligations are imposed on the persons or organizations named or described in each accessibility standard. These persons or organizations are required to implement the measures, policies, practices or other requirements set out in the standard within the time periods specified.⁴⁹ Unlike the ODA, which had varying obligations depending on the issue, the AODA simply obliges those subject to a standard to follow its requirements. The standards, in turn, have been developed with the input of stakeholders representing persons with disabilities, government and industry. They may have variety or unevenness depending on the topic or issue, but the lack of consistency is theoretically sanctioned by stakeholder approval.

To date, standard development committees have created standards in each of the five areas identified by the Minister shortly after the AODA came into force: customer service, transportation, information and communications, employment, and the built environment.⁵⁰ A current and significant challenge, though, concerns enforcing the obligations under the standards that have been created. The statute indicates that the obligations are binding and that the goal of the legislation is to make the province accessible by 2025.⁵¹ However, on the ground, there are lapses in compliance caused in part by weaknesses in enforcing inspections and other oversight tools that are at the disposal of the government.⁵² The ability to order inspections of businesses that have not complied with the standards lies within the discretion of the government's ministry and, in particular with the Accessibility Directorate of Ontario. Two years after the first filing due date, 70% of companies had not filed a report, representing 36,000 businesses across the province. They also had not been audited. As of 2016, only four violations have been brought before the responsible tribunal.⁵³ Clearly, if the legislation

⁴⁹ *Id.* § 6(b).

⁵⁰ See *Charting A Path Forward: Report of the Independent Review of the Accessibility for Ontarians with Disabilities Act, 2005*, 13 (Charles Beer: Reviewer, Toronto: Queen's Printer for Ontario, 2010).

⁵¹ AODA, *supra*, § 1(a). The minister may create standards in additional areas under the Act.

⁵² See Laurie Monsebraaten, *Ontario vows to enforce accessibility law: Businesses flout requirements to report on how they are meeting needs of customers with disabilities, while enforcement strategy lags*, (Toronto Star, February 20, 2014). The AODA provides for a director to order an administrative penalty if there is a lack of compliance (§ 21(6)). There are also fines for offences. Offences represent more serious actions such as filing false or misleading information, or failing to comply with an order made by a director or the License Appeal Tribunal on review. A person found guilty of an offence under the AODA may be required to pay a maximum fine of \$50,000 a day or, if the person is a corporation, a maximum fine of \$100,000 a day during the time over which the offence occurs or continues to occur (§ 37).

⁵³ The responsible tribunal is the Licensing Appeal Tribunal. Two decisions are reported, see *8750 v Director under the Accessibility for Ontarians with Disabilities Act, 2005*,

is to have an impact, the enforcement and/or incentive piece needs to be rethought.

ii. *The Duty to Consult with Persons with Disabilities*

The duty to consult is extensive under the AODA. The instances in which affected citizens may participate are more numerous, rigorous and consistent than they were under the ODA. In contrast to the ODA, every standard is developed by a standard development committee which puts together the first version of the regulations. The statute states: “the Minister shall establish standards development committees to develop proposed accessibility standards which shall be considered for adoption by regulation”.⁵⁴

The standard development committees must comprise persons with disabilities, representatives from government and the industries that will be affected, and any other person or organization that the Minister deems to be advisable.⁵⁵ The deliberations leading to the development of the standards under the AODA are therefore based on consultative dialogue within the committees. The draft proposed standard is also put out for public consultation before being submitted to the Minister for final approval.⁵⁶ The members of the public who are involved in consultation under the AODA therefore represent a much wider cross-section of the general public than under the earlier statute, the ODA.

Both the Chair and the standard development committee members are selected by the responsible minister through an application process that is open to the public. But, as with many other areas of government and administrative law, the minister’s selections may have a profound influence on the outcome of the consultation processes.

The process by which the consultations take place may be found in the terms of reference for each of the standard development committees. The terms of reference are soft law documents, created by ministerial discretion. The terms of reference for the five complete standards are now in the archives but at the time that each committee started its work, they were posted on a government website dedicated to the AODA.⁵⁷

Consensus is required for committee decisions but is defined in a way that does not require unanimity. The terms of reference indicate that consensus means “substantial agreement of members, without persistent opposition, by a process taking into

2014 CanLII 46587 (ON LAT); *8635 v Director under the Accessibility for Ontarians with Disabilities Act, 2005*, 2014 CanLII 53673 (ON LAT); the other two cases are unreported.

⁵⁴ AODA, *supra*, at § 8.

⁵⁵ *Id.* § 8(4).

⁵⁶ *Id.* § 9(6).

⁵⁷ See AODA Customer Service Accessibility Standards Development Committee, Terms of Reference (October 14, 2005):

account the views of all members in the resolution of disputes”.⁵⁸ On the ground, it is likely challenging to determine if this malleable standard has been satisfied.

In addition, the terms of reference indicate under “Member Rules and Responsibilities” that every member of the committee has an obligation to present their views and interests and those of the organizations that have endorsed them, to the best of their ability at all committee meetings.⁵⁹ The Chair, by contrast, has a duty to “encourage the balanced analysis of all relevant issues and questions from a variety of perspectives”.⁶⁰ The Chair’s responsibilities are to be completed in a nonpartisan and impartial manner.

In conclusion, the AODA’s language presents a strong commitment to citizen participation in the development of an accessible province. In comparison to the ODA, the AODA has more expansive and rigorous obligations, and expressly provides for persons with disabilities, representatives of government and industry to play a principal role in developing the standards. Moreover, the general public has a chance to participate through a notice and comment type review of the draft regulations prepared by the stakeholders in the standard development committees. Challenges on the ground have related to enforcing compliance through governmental discretion. The use of a soft consensus within the standard development committees and of ministerial discretion to choose the heads of the committees may also prove challenging.

B) Manitoba

1) *The Accessibility for Manitobans Act (AMA)*

The Manitoba Legislature enacted the AMA in December, 2013. It largely follows the model of the AODA in its general idea of incorporating the participation of persons with disabilities and other stakeholders in creating standards. However, it also contains marked differences that show an effort to improve upon the potential of accessibility legislation to effect social change, and to tailor the statute to local issues.

⁵⁸ *Id.* § 2 states:

“All standards development committees will be required to achieve consensus on committee decisions that fulfill the Terms of Reference for each committee.

Consensus means substantial agreement of members, without persistent opposition, by a process taking into account the views of all members in the resolution of disputes. Unanimous decisions are not necessarily required to achieve consensus.”

⁵⁹ *Id.* §7. The section reads in part: “7. Member Roles and Responsibilities

In addition to contributing to the fulfillment of the roles and responsibilities assigned to the committee as a whole, individual members will:

[...]

c) during all committee meetings and activities, present their respective views and interests and, to the best of their abilities, present the views and interests of those organizations, industries, sectors of the economy or other classes of individuals or organizations or communities of interest which have endorsed members for the purpose of representing or presenting such views or interests; [...].”

⁶⁰ *Id.* § 9.

a) Purpose, Guiding Principles and Underlying Values of the Statute

The purpose of the *Accessibility for Manitobans Act* (AMA) is to achieve accessibility in five main areas of social interaction: employment, accommodation, the built environment, the delivery and receipt of goods, services and information, and prescribed activities or undertakings. There are three distinct differences from the AODA with respect to this list of areas. First, while the purpose section of the AODA specifies that one of the goals of the Act is to achieve accessibility in relation to “buildings, structures and premises”, it does not mention transportation in the statute itself. The fact that accessibility standards were created in Ontario with respect to transportation is a result of ministerial discretion. By contrast, the AMA specifies that the concept of the built environment includes public transportation and transportation infrastructure,⁶¹ placing a clear, positive responsibility on government to ensure that transportation accessibility is addressed through regulatory standards.

A second difference from the AODA is that the AMA explicitly refers to the delivery and receipt of *information* within its purpose section, bringing attention to the importance of communication and information sharing with the disability community.⁶² “Information and communication” is repeated in the section of the Act identifying examples of barriers.⁶³ By contrast, the purpose section of the AODA does not include “information”, though it is included in the list of examples of barriers.⁶⁴ The list of barriers is otherwise close to identical in the three statutes (the ODA, AODA and AMA).⁶⁵

Finally, the notion of preventing and removing barriers with respect to “a prescribed activity or undertaking” is not present in the earlier accessibility laws. This is a useful phrase that captures well the idea that new activities and undertakings may be the subject of accessibility standards at any time.

With respect to its underlying values, the AMA presents a distinctively modern understanding of the experience of inaccessibility faced by persons with disabilities. The statute uses the expression “persons disabled by barriers” throughout. “Persons disabled by barriers” is not an expression used by any of the preceding accessibility statutes in Canada but one that is firmly anchored in the social model of disability as it locates the source of disablement and inequality in the sociopolitical environment as opposed to locating it within the medical

⁶¹ *Accessibility for Manitobans Act*, CCSM c A1. 7, § 2 (1) (c)(ii).

⁶² *Id.* § 2(1)(d).

⁶³ *Id.* § 3 (2)(c).

⁶⁴ The ODA does not have a purpose section, making comparison with the ODA's purpose section not possible.

⁶⁵ The only difference is that the AMA speaks of barriers established by enactment in addition to those caused by policy or practice. See ODA, § 2 (“barrier”); AODA, § 2 (“barrier”) and AMA, § 3(2).

impairment of the individual.⁶⁶ The more standard, “persons with disabilities” has generally been adopted by legislators in the provinces and territories across Canada.

In addition to the use of progressive language, the AMA presents broader, more humanistic reasons for achieving accessibility in the province than what is seen in the ODA and AODA. For example, the preamble of the AMA asserts that achieving accessibility will result in improvements to the health, independence and well-being of individuals disabled by barriers and that the wide range of obstacles prevents the attainment of equal opportunities, independence and full economic and social integration. The preamble also draws attention to the familiar idea that we are all temporarily able-bodied by recognizing that “most Manitobans will confront barriers to accessibility at some point in their lives”⁶⁷. Finally, there is an emphasis on the costs of inaccessibility which is not seen in any of the previous accessibility statutes in Canada. The AMA articulates a concern that accessibility barriers create considerable costs to people disabled by them, as well as to their families, friends, communities and the general economy. The underlying philosophy of the AMA is therefore deeply rooted in the well-being of persons disabled by barriers, emphasizing that the persistence of these barriers has an impact not only on persons disabled by barriers but also on the general community.

Statutory interpretation of the AMA and standard development are to be guided by the respect of four essential principles — access, equality, universal design and systemic responsibility.⁶⁸ The concept of access refers to barrier-free access to places and events and to other functions generally available in the community. Although there are a few key conceptions of equality in human rights law,⁶⁹ equality of opportunity and outcome are those on which the statute rest. The statute further emphasizes the importance of providing accessibility based on universal design. Finally, the AMA focuses on systemic responsibility which is the idea that the person or organization responsible for

⁶⁶ On the theory of the social model and for critiques of it, *see*, generally, Tom Shakespeare, *The Family of Social Approaches in Disability Rights and Wrongs*, 9-28 (New York: Routledge, 2006), and Anita Silvers, *An Essay on Modeling: The Social Model of Disability* in Christopher D Ralston, and Justin Ho, (eds.), *Philosophical Reflections on Disability*, 19-36 (New York: Springer, 2010).

⁶⁷ AMA, *supra*, at Preamble.

⁶⁸ *Id.* § 2(2) which reads:

“Principles

2(2) In achieving accessibility, regard must be had for the following principles:

Access: Persons should have barrier-free access to places, events and other functions that are generally available in the community;

Equality: Persons should have barrier-free access to those things that will give them equality of opportunity and outcome;

Universal design: Access should be provided in a manner that does not establish or perpetuate differences based on a person's disability;

Systemic responsibility: The responsibility to prevent and remove barriers rests with the person or organization that is responsible for establishing or perpetuating the barrier.”

⁶⁹ *Charter, supra* at § 15, for example, provides that:

“Every individual is equal before and under the law and has the right to the equal protection and equal benefit of the law without discrimination...”.

establishing or perpetuating the barrier also has the responsibility to remove and prevent those barriers. Again, as with the use of progressive descriptors, and the emphasis on humanistic reasons for eradicating barriers and improving accessibility, the AMA's guiding principles add a new element to the accessibility laws in the country not seen in earlier accessibility statutes.⁷⁰

It is clear that the policymakers wanted to ensure that the enactment of the AMA did not excuse obligations that already existed under other equality rights instruments (such as the provincial *Human Rights Code*⁷¹), and that the legislation is in keeping with the UN *Convention on the Rights of Persons with Disabilities*⁷². Finally, there is a strong commitment to have a “Made-in-Manitoba” perspective engrained in the legislation and the standards created under the AMA. This idea was clearly and repeatedly stressed in the discussion papers and other documents leading up to the creation of the statute and of the customer service standard.⁷³ Although its depths and limits are not fully delineated, at least two ideas emerge from this material as to the meaning of this phrase. First, Manitobans wanted to ensure that the legislation addresses problems that are prevalent to Manitobans with disabilities. This means that even if a similarly described problem exists in Ontario, the response in Manitoba will be tailored to ensure that it is the Manitoba experience that is addressed. The second idea is that the legislation should complement the family of legislation that already exists in Manitoba to address issues of social inclusion for persons with disabilities. The discussion paper leading to the creation of the AMA outlines, for example, the province's experience of developing a consultative strategy to create an age-friendly initiative in Manitoba.⁷⁴ The AMA will expand on this initiative, partly by ensuring that seniors are involved in the consultation so that there is recognition of access issues faced by seniors as well.

⁷⁰ The use of guiding principles occurs in at least one accessibility standard. See Ontario's Customer Service Regulation, O. Reg. 429/07, §§ 3(2) which indicates that the provider of goods and services must provide them in an integrated fashion unless that is not possible, a manner that respects the dignity and independence of persons with disabilities, and provide an equal opportunity to obtain use or benefit from the goods or services.

b) Obligations and Consultation under the AMA

i. Obligations

Under the AMA, accessibility standards are established by regulation and identify the persons or organizations that are subject to them. The AMA indicates also that each standard will set out the requirements and any applicable time frames.⁷⁵ In keeping with the purpose section, which outlines the areas where accessibility is to be achieved, the statute specifies that an accessibility standard may apply to a person or organization that employs; offers accommodation, owns, operates, maintains or controls an aspect of the built environment; provides goods, services or information; is engaged in a prescribed activity or undertaking; or meets other prescribed requirements.

The AMA's scope of application is very similar to the AODA. It clarifies, however, that owners and occupiers of residential premises with two or more dwelling units are expressly exempted from application of the Manitoba statute.

Persons and organizations, including public sector bodies are subject to the Act. They have an obligation to prepare and keep records in accordance with the requirements of the standards, to make those records available for inspection and examination if called upon to do so, to comply with accessibility standards within any time period specified and, generally, to cooperate with directors and inspectors, refraining from making false or misleading statements and records, reports or otherwise.⁷⁶ Failure to fulfill these obligations can lead to a finding of guilty of an offence under the AMA and a maximum fine of \$250,000.⁷⁷

The responsible minister also has a duty to raise awareness about disabling barriers, to promote and encourage the prevention and removal of barriers and, generally, to ensure that accessibility standards are developed and implemented smoothly.⁷⁸ These are strong positive obligations wisely placed within the text of the statute itself. Equivalent responsibilities for the responsible minister do not appear explicitly in either of the two Ontario accessibility statutes. However, the responsible minister who decides to carry out such functions may delegate them to the Accessibility Directorate of Ontario.⁷⁹

ii. *The Duty to Consult with Persons with Disabilities*

In Manitoba, the process for creating accessibility standards starts with the responsible minister's terms of reference. Significant

⁷⁵ AMA, *supra*, §§ 6(1) and 6(2).

⁷⁶ *Id.* § 34.

⁷⁷ *Id.*

⁷⁸ *Id.* § 5(1).

⁷⁹ AODA, *supra*, at § 32(3).

emphasis is placed on the terms of reference. Unlike the terms of reference under the AODA which do not require much detail outside of the deadlines by which various stages of the standard development process must be completed, the terms of reference under the AMA must specify the sector, persons or organizations that may be made subject to the Act.⁸⁰ This is a questionable development. It may save time but it eclipses democratic deliberation over a fundamental element of any standard: who will be subject to it.

The Accessibility Advisory Council has the authority to create the standard development committees unlike the AODA which gives this power to the minister. The AMA does not specify the composition of the standard development committees. By contrast, it specifies that the Accessibility Advisory Council must contain 6 to 12 members chosen from the disability community and sectors, persons or organizations that may be affected by accessibility standards.⁸¹ Consultation must take place between the Accessibility Advisory Council, persons disabled by barriers or representatives of their organizations, members of the sectors and government that may be made subject to the proposed standard and anyone else that the minister considers advisable.

The process for creating the standards is very similar that of the AODA, including a requirement of substantial consensus⁸² and the notice and comment period for the draft standard.⁸³

§ 2 – HUMANIZING DISABILITY LAW? APPLYING SUNSTEIN’S FRAMEWORK OF ANALYSIS

We have now seen a detailed and comparative overview of accessibility legislation in Canada. How well does this regulatory process featuring citizen participation work? One way to examine the effectiveness of the legislation is to do so through a framework of analysis based on regulatory theory.

In his 2014 book, *Valuing Life: Humanizing the Regulatory State*⁸⁴, Harvard law professor, Cass Sunstein asserts that governments should focus on the human consequences of their actions. In creating regulations, they should consider factors such as the effects of their actions or inaction; the number of lives that would be saved, if any; whether people will be burdened and, if so, the extent to which they will be burdened; and who exactly will be helped and/or hurt.⁸⁵ Sunstein suggests that governments “seek a method to allow them to make sensible comparisons and to facilitate choices among values that are difficult or impossible to quantify, or that seem incommensurable.”⁸⁶ Furthermore, a wide

⁸⁰ Contrast AODA, § 8(6) with AMA § 8(2).

⁸¹ See AMA § 15(1) and 15(2).

⁸² See AMA § 9(5).

⁸³ The process has been laid out by the Manitoba government at: <http://www.accessibilitymb.ca/how-standards-are-created.html>.

⁸⁴ See *Valuing Life*, *supra*.

⁸⁵ *Id.* at 1.

⁸⁶ *Id.*

breadth of knowledge should be brought into the decision-making process. It is important for governments to go beyond the knowledge that they acquire from their public officials. Humanizing the regulatory state requires them to seek knowledge from citizens as well.⁸⁷

The question, of course, is how to go about achieving these objectives. When it comes to determining the consequences of regulations made, evaluating factors such as the effects of actions or the number of lives that would be saved may impose significant information-gathering obligations on government officials. Moreover, how does one value certain benefits or losses? By what method can one assess the value of preventing prison rape, protecting privacy or — an example provided by Sunstein and that fits rather aptly in the context of accessibility standards — providing wheelchair users independent access to public washrooms? Sunstein argues for the use of a breakeven monetary analysis. While he accepts that goods may be qualitatively diverse in the same transaction (for example, money and the dignity of avoiding prison rape; or money compared to the dignity and equality of social inclusion for persons with disabilities), Sunstein contends that pinpointing some sort of monetary value will provide transparency to the government's decision-making process in creating regulations. He proposes that it should be possible to determine upper and lower bounds for non-quantifiable goods and that these upper and lower boundaries will help to promote sensible trade-offs.⁸⁸ For example, it may be possible to determine the lowest and highest amount that a person with a mobility disability would be willing to pay to have access to washroom facilities.

At the same time, Sunstein recognizes that there may be questions about the appropriateness (including the morality) of such comparisons, and that there may be broader social goals, such as distributive justice or the recognition of equality, that motivate a government to regulate. Nevertheless, Sunstein suggests, that even in such circumstances, an economic breakeven analysis should be performed because it helps to explain why the case is difficult and what information could be helpful, if present. Sunstein writes: "In some cases, however, agencies will not be able to identify lower and upper bounds in any way, and breakeven analysis will be helpful largely insofar as it explains what information is missing and why some cases are especially difficult."⁸⁹

Overall, Sunstein argues that to humanize the regulatory state, it is necessary for governments to: i) take account of values that are difficult or impossible to quantify; ii) capture qualitatively diverse goods and promote sensible trade-offs among them; and iii) attempt to benefit from the dispersed information of a wide variety of human beings.⁹⁰ In his opinion, if these steps are taken,

⁸⁷ *Id.*

⁸⁸ *Id.* at chapter 3.

⁸⁹ *Id.* at 67.

⁹⁰ This is nicely summarized in the Epilogue of *Valuing Life, supra*.

the result will be regulations based less on intuition and more on disciplined analysis as to what is justifiable.

Using qualitative empirical examples drawn from Manitoba's consultation hearings and AODA legislation and policy, I illustrate in the next and final part of this article, that existing consultative processes for accessibility legislation succeed to varying degrees in: i) capturing qualitatively diverse goods and promoting sensible trade-offs among them, ii) taking account of values that are difficult or impossible to quantify, and iii) attempting to benefit from the dispersed information of a wide variety of human beings. I argue, however, that Sunstein's proposal to value life through monetary means poses significant problems on the ground in the context of disability access standards.

Examples from the *Accessibility for Manitobans Act* customer service standard consultation process illustrate that there are circumstances where quantification would be impossible, inappropriate and/or would prove unhelpful to the regulatory process. There are also instances where regulations within disability access standard-setting and similar processes appear to be based on intuition. As a response to both instances, I suggest that providing a process for clarification and the space for further dialogue among stakeholders provide equal, if not more, appropriate potential for advancement than attempting to quantify the issues.

1) Taking Account of Values That Are Difficult or Impossible to Quantify

Cass Sunstein asserts that in order for governments to focus on the human consequences of their regulatory actions, they must take into account values that are difficult or impossible to quantify. There is no doubt that the accessibility standard-setting processes set up by the Canadian provincial governments take account of such values. In essence, they deal with equality rights—specifically equal access, equal opportunity and equality of well-being. Some disability scholars would argue that these equality rights also represent a move towards true citizenship within the community for persons with disabilities.⁹¹ The areas set out by the government in which standards are to be developed (customer service, transportation, information and communications, employment, and the built environment) also all inherently deal with qualitative values such as respect, dignity, time, appreciation and safety, that are difficult to quantify or escape quantification altogether.

In the development of the customer service standard in Manitoba, a discussion took place during the public hearings on whether training materials for customer service representatives in

⁹¹ See Marcia H. Rioux, *Towards a Concept of Equality of Well-Being: Overcoming the Social and Legal Construction of Inequality* 127 (7 Can. J.L. & Juris., 1994).

retail stores should simply be adopted from Ontario where a regulation had already been made.⁹²

The representative from the Retail Council of Canada was of the opinion that adopting the material from another province was an opportunity for store owners with chain stores across the country to have one uniform training standard. The implication was that it would therefore be easier in terms of the time taken to train customer service representatives, especially if done collectively. By contrast, a representative of a prominent national disabled women's network spoke up to indicate that the Ontario standard had not been tested fully at and that she had experienced a lot of insensitivity on the part of retail store clerks. Her point was that she did not want the perpetuation of this type of insensitivity to be spread across the country when it could be halted by reassessing and evaluating what was done in Ontario and possibly developing more effective standards, if necessary, in each province.

The ultimate determination by the Manitoba Customer Service Standard Development Committee was forced to take into account both the time it takes to train employees nationally, which is possibly quantifiable, and the "insensitivity" (indignity) that the disabled population would like to escape and denounce. The second of these is certainly beyond quantification, dealing as it does with a complex interrelation of values such as social interaction, protection of dignity and degradation. This example illustrates not only Sunstein's humanizing approach in action but also some of the finer aspects of the challenge of valuing non-quantifiable goods.

2) Capturing Qualitatively Diverse Goods and Promoting Sensible Trade-Offs Among Them

Sunstein emphasizes the importance of transparency and accountability within the regulatory process. To make sensible trade-offs among qualitatively diverse goods in a transparent and accountable fashion, he asserts that quantification is the most useful tool. He also asserts that quantification should not be an unfamiliar tool to the everyday person as this sort of economic balancing is used often in everyday life. Sunstein writes: Quantification helps to promote accountability, transparency, and consistency, and it can also counteract both excessive and insufficient stringency. When regulators quantify and monetize relevant goods, the goal is to promote sensible choices, not to erase differences among qualitatively distinct goods. Nor should this point be unfamiliar from daily life. People decide how much to spend to educate their children, on health insurance, to reduce risks on the highway (as, for example, by purchasing especially

⁹² These observations are taken from the public consultation hearing relating to the proposed Customer Service Standard, held in Winnipeg, Manitoba on June 17, 2014; video archive available online: <http://archive.isiglobal.ca/govmb/2014-06-17-live.html>.

safe cars), on food, on housing, and on vacations. When they make trade-offs among these and countless other diverse goods, they do not pretend that they are qualitatively identical.⁹³

In the disability context, however, qualitatively distinct goods can invite manifold answers as to what a “sensible” trade-off might be. Quantification may be one possibility for determining the best outcome. However, it would appear that asserting that one outcome is more “sensible” than another really requires a more thorough canvassing of what “sensible” possibly means. A discussion of this nature would be wise to explore questions such as: Whose concept of sensible is most appropriate and why? What power dynamics are at play? And will any regulatory avenue promote and preserve dynamics that counter the pursuit of equality for persons with disabilities? I argue that it is more effective to capture qualitatively diverse goods and then to focus on the deeper foundational question of why any one choice or preference may be the most appropriate. Promoting further discussion on the very nature of why any one preference should be chosen over another should be at the heart of the regulatory process.

To provide an example, consider another discussion that ensued at the public consultation hearings over the proposed Manitoba customer service standard. An individual from a postsecondary institution raised the question of who should fall within the definition of “customer” in the context of educational institutions. She indicated that it was quite clear that customer service is offered to the students being taught in class. She did not have an issue with that. She wondered, though, whether the definition of “customer” had a particular geographic reach. For instance, would the definition apply to students using gym facilities? She wondered also whether the standard would regulate the post-secondary institution’s interaction with any person who entered the campus (a connection *in personam*).

An approach based on *Valuing Life* would strive to assign an economic value to each of what I have termed the geographic and *in personam* options. The valuation may be based on a percentage of the total wages of staff at the post-secondary institution who would serve persons with disabilities in these two contexts. It may also bring into account any extra time that assisting might take, translating that extra time into a monetary value as well.

By contrast, the approach that I suggest would invite all stakeholders to a further discussion over what an appropriate interpretation of “customer” should be. Already, a couple of key concepts can be seen from the hearing. For instance, another member of the public who was at the hearing spoke up in order to emphasize that the customer service standard was about equal access. A second individual shared a story illustrating the barrier presented by inaccessible recreation facilities for parents with disabilities who want to participate in watching their children play

⁹³ *Valuing Life*, *supra* at 70.

sports so that they can support their children along with the other parents. If substantive equality is to be taken seriously, then an argument that favours a broader view of equal access, particularly one that allows children at a school to receive support from their parents with disabilities as visitors to the campus should be promoted. A monetary approach would not have caught or addressed these nuances, leading to a result that may not resonate with those affected.

3) Attempting to Benefit From the Dispersed Information of a Wide Variety of Human Beings

Sunstein's theory highlights the importance of having a broad range of views that extends past the public service informing regulatory choices. There is no doubt that the regulatory processes for the development of accessible legislation in Canada reflect this approach. The terms of reference for the AODA Customer Service Accessibility Standards Development Committee, for example, state that the committee must: "Consider the full range of disabilities in identifying barriers in the provision of customer service in Ontario and develop a proposed Customer Service Accessibility Standard to address those barriers. Appreciate and advance, in a balanced and fair way, the views and interests of the diverse Ontario sectors, industries, organizations, groups, communities and persons with disabilities. [...] Accommodate persons with disabilities on the committee in all parts of the committee process. [...]"⁹⁴ A similar approach has been taken with respect to the reviews of the statute required to take place every four years.⁹⁵ These reviews have come with terms of reference that allow the appointed reviewer to decide on the method of consultation. Reviewers who pay attention to diversity have been appointed. For example, the most recent reviewer paid attention to ensuring that there was regional diversity and made a place for tools such as webinars in order to enable persons with disabilities, and those in remote areas etc. to attend.⁹⁶

4) Intuition Rather than Disciplined Analysis?

Sunstein argues that the above-mentioned regulatory approach (i) taking account of values that are difficult or impossible to quantify; ii) capturing qualitatively diverse goods and promoting sensible trade-offs among them; and iii) attempting to benefit from the dispersed information of a wide variety of human beings) will provide a disciplined analysis and sensible regulatory

⁹⁴ See AODA Customer Service Terms of Reference, *supra* at § 5.

⁹⁵ See AODA, *supra*, § 41.

⁹⁶ Interview with 2014 AODA Reviewer, Mayo Moran, July 3, 2015 (notes on file with author).

choices, so long as economic valuation is incorporated in the balancing equation. It will also limit regulatory choices that are based on intuitive responses as to what is most appropriate, moral or just.⁹⁷

The Manitoba public hearing on the proposed customer service standard presents a number of illustrations where the proposed standard had been founded on some element of intuition. In these examples, further dialogue led to a more disciplined analysis. In much the same way, deepening dialogue can promote sensible trade-offs among qualitatively diverse goods.

Take the question of what counts as “disruptions of service” as an example. Manitoba’s proposed customer service standard indicated that disruptions should be brought to the attention of persons with disabilities. One might assume intuitively that both disruptions in disabled access to the actual goods and services (for example, a store is shut down temporarily) and disruptions in services on which persons with disabilities rely (for example elevators) would trigger action under this provision. Indeed, both interpretations were raised at the public hearing. However, discussions at the public hearings revealed that only disruptions of services that are relied on by persons with disabilities seemed to be caught by the literal words of the standard. Again, this is an area that requires clarification, a discussion of what the trade-offs are and how they should be made. Some clarification began at the hearing with stakeholders highlighting some of the values they saw as central to the definition. As with defining who is a “customer”, the concept of equal access was again raised. The discussion of service disruption also brought in the perspectives of elevator service technicians and store owners discussing the on-the-ground practicality of putting up notices when such disruptions can sometimes be very quickly fixed. Quantification would have put a very different spin on the discussion – one that would have moved the discussion to a more utilitarian realm, eclipsing the equality debate.

In conclusion, Sunstein offers a useful framework for beginning to understand whether regulatory process has been efficient, especially when dealing with qualitative, and intangible human values that profoundly affect people’s lives. The development of disability access standards to concretize, protect and, frankly, act as a vehicle for persons with disabilities to have fuller connections with society, are precisely the types of issues that fit within Sunstein’s theoretical framework. However, in light of on-the-ground examples, there are still very significant issues that require more guidance before the effectiveness of any such framework can be fully determined. These are the harder questions such as how to establish what a “sensible” trade-off might be when one considers qualitatively diverse goods, whose definition of sensible should count, and what to do if a blended compromise is not possible. Using what we can of the Sunstein analytical framework,

⁹⁷ See Epilogue of *Valuing Life*, *supra*.

this discussion has shown that the consultative regulatory process associated with the development of disability access legislation in Canada is fairly successful in: i) capturing qualitatively diverse goods and promotes sensible trade-offs among them, ii) taking account of values that are difficult or impossible to quantify, and iii) attempting to benefit from the dispersed information of a wide variety of human beings. The legislative wording and consultation documents reveal that there may be room for intuition rather than a disciplined analysis to inform the ultimate development of the regulations. When values that are difficult or impossible to quantify are taken into account, there must be an additional way of determining which path is appropriate. In such cases, I suggest furthering and deepening the dialogue to identify and consider questions that relate to issues such as the power dynamics and implicit negative repercussions to equality.

CONCLUSION

– « *I was aware of the fact that this issue touches people's lives so profoundly and yet there are very few venues for input.* »⁹⁸

In conclusion, how does one legislate for social change? This has been the central preoccupation of the movement towards disability access standards legislation. It is also still a concern as Canadian federal and sub-national governments move forward through the consultation processes and development of the actual standards.

It is clear that citizen participation has a significant and important role in gathering the perspectives of stakeholders who will be affected by the legislation. This is a positive step as it allows for greater deliberation in the development of regulations. Stakeholders or their representatives deliberate and then prepare the proposed first draft of the standards (eventually to be passed as regulations). Further and broader public input is brought through the notice and comment period before the regulation is finalized and enacted. Of course, further research could be done on how effective these consultations are in giving voice to persons with disabilities.

Challenges certainly exist on the ground with respect to the consultation process itself – for example, in determining when adequate consensus has been reached. Additional challenges have also been manifest in the enforcement of the standards in Ontario. However, from the time of the first standards legislation in 2001 to the *Accessibility for Manitobans Act* enacted in 2013, one sees a consistent strengthening in the legislative language in terms of guaranteeing citizen participation, ensuring more consultation, and with respect to the very concepts of what it means to be a person with a disability and the humanistic reasons for providing accessibility.

Finally, this Canadian case study shows that Sunstein's approach to humanizing the regulatory process offers limited utility as an

evaluation tool. The qualitatively distinct social goods relating to disability access do not lend themselves to the economic analysis underlying Sunstein's framework. Deepening the dialogue to ensure disciplined analysis would be more appropriate and useful for making it difficult regulatory choices than a reversion to economic valuation in such cases. Legislating for social change is challenging, but the Canadian case study shows promise for equality and citizen inclusion to all involved in the long run.
