The History of Attitudes toward Comics and Literacy

Prior to their current renaissance, comics were often viewed, at best, as popular entertainment and, at worst, as a dangerous influence on youth. Such attitudes were certainly prevalent in the early 1950s when comics were at their most popular, with critics such as Fredric Wertham voicing the most strenuous arguments against comics in his 1954 book *Seduction of the Innocent* (for an extended discussion of this debate, see Dorrell, Curtis, and Rampal). Wertham baldly asserts that “[c]omic books are death on reading” (121). He goes on, “Reading troubles in children are on the increase. An important cause of this increase is the comic book. A very large proportion of children who cannot read well habitually read comic books. They are not really readers, but gaze mostly at the pictures, picking up a word here and there. Among the worst readers is a very high percentage of comic-book addicts who spend very much time ‘reading’ comic books. They are book-worms without books” (122). According to this thinking, children who read comic books are not really reading; they are simply looking at the pictures as a way to avoid engaging in the complex processes of learning to read. The problem, according to Wertham, is that in reading comics children focus far too much on the image to make meaning and avoid engaging with the written word, a semiotic system that Wertham clearly sees as both more complex and more important. Though he sees the

Over the last several years, comics have been an ever more visible and well-regarded part of mainstream culture. Comics are now reviewed in major newspapers and featured on the shelves of independent and chain bookstores. Major publishing houses such as Pantheon publish work in the comics medium, including books such as Marjane Satrapi’s *Persepolis* and David B.’s *Epileptic*. Educational publishers such as Scholastic are also getting in on the act; in January 2005, Scholastic launched its own graphic novels imprint, Graphix, with the publication of Jeff Smith’s highly acclaimed Bone series. At the NCTE Annual Convention, graphic novels and comics are displayed in ever greater numbers. School and public libraries are building graphic novels collections to try to get adolescents into the library. Comics have, indeed, emerged from the margins into the mainstream.

With all this activity and discussion surrounding comics, it is timely to consider how we as literacy teachers might think about the practice of using comics in our classrooms and how this practice fits into ongoing debates about comics and literacy. In examining these links between theory and practice, I wish to move beyond seeing the reading of comics as a debased or simplified word-based literacy. Instead, I want to advance two ideas: (1) reading comics involves a complex, multimodal literacy; and (2) by using comics in our classrooms, we can help students develop as critical and engaged readers of multimodal texts.

The History of Attitudes toward Comics and Literacy

Historically, comics have been viewed as a “debased or simplified word-based literacy,” explains Dale Jacobs, who considers comics to be complex, multimodal texts. Examining Ted Naifeh’s *Polly and the Pirates*, Jacobs shows how comics can engage students in multiple literacies, furthering meaning-making practices in the classroom and beyond.

Dale Jacobs

More Than Words: Comics as a Means of Teaching Multiple Literacies

Over the last several years, comics have been an ever more visible and well-regarded part of mainstream culture. Comics are now reviewed in major newspapers and featured on the shelves of independent and chain bookstores. Major publishing houses such as Pantheon publish work in the comics medium, including books such as Marjane Satrapi’s *Persepolis* and David B.’s *Epileptic*. Educational publishers such as Scholastic are also getting in on the act; in January 2005, Scholastic launched its own graphic novels imprint, Graphix, with the publication of Jeff Smith’s highly acclaimed Bone series. At the NCTE Annual Convention, graphic novels and comics are displayed in ever greater numbers. School and public libraries are building graphic novels collections to try to get adolescents into the library. Comics have, indeed, emerged from the margins into the mainstream.

With all this activity and discussion surrounding comics, it is timely to consider how we as literacy teachers might think about the practice of using comics in our classrooms and how this practice fits into ongoing debates about comics and literacy. In examining these links between theory and practice, I wish to move beyond seeing the reading of comics as a debased or simplified word-based literacy. Instead, I want to advance two ideas: (1) reading comics involves a complex, multimodal literacy; and (2) by using comics in our classrooms, we can help students develop as critical and engaged readers of multimodal texts.
Comics have made their way into schools mainly as a scaffold for later learning that is perceived to be more difficult, in terms of both the literate practices and content involved.

Visuality of comics as dangerous, Wertham shares the notion with current proponents of comics that the visual is more easily ingested and interpreted than the written. Whether the visual acts as a hindrance or a help to the acquisition of word-based literacy, the key idea remains that the visual is subservient to the written.

When I was growing up in the 1970s, I never saw comics in school or in the public library unless they were being read surreptitiously behind the cover of a novel or other officially sanctioned book. Over the last decade, however, there has been a movement to claim a value for comics in the literacy education of children. Comics have made their way into schools mainly as a scaffold for later learning that is perceived to be more difficult, in terms of both the literate practices and content involved. For example, Comics in Education, the online version of Gene Yang’s final project for his master’s degree at California State University, Hayward, embodies thinking that is typical of many educators who advocate the use of comics in the classroom. Yang, a teacher and cartoonist, claims that the educational strength of comics is that they are motivating, visual, permanent, interactive, and popular. In emphasizing the motivational, visual permanency (in the way it slows down the flow of information), intermediacy, and the popular, such approaches inadvertently and ironically align themselves with Wertham’s ideas about the relationship between word and image, even while bringing comics into the mainstream of education. Comics in this formulation are seen simply as a stepping stone to the acquisition of other, higher skills. As a teaching tool, then, comics are seen primarily as a way to motivate through their popularity and to help slow-learning students, especially in the acquisition of reading skills (see Haugaard and Koenke). While I agree with these attempts to argue for the value of comics in education, such an approach has limited value.

Libraries have also been important in the reconsideration of the place of comics as appropriate texts for children in their literacy learning and acquisition. Recently, many librarians have been arguing for the introduction of comics into library collections, usually in the form of graphic novels, as a way to get children into the library and interested in reading. The main thrust of this argument is that the presence of graphic novels will make the library seem cool and interesting, especially among the so-called reluctant readers, mainly adolescent boys, who seem to show little interest in reading or in libraries (see Crawford and Simmons). Graphic novels can compete with video games, television, and movies, giving the library the advantage it needs to get this specifically targeted demographic through the door. Many public libraries and librarians have seen the power of comics and graphic novels as a tool for drawing young people into the library, getting them first to read those comics and then building on that scaffold to turn them into lifelong readers. Again, while I agree with the inclusion of comics and graphic novels in library collections, such an approach places severe limitations on the possibilities of our uses of the medium as literacy educators.

To think through these ideas, let’s assume that this strategy has some of its desired effects in drawing reluctant readers into the library and coaxing them to read. What can we then say about the effects of this approach and its conception of comics and their relation to developing literate practices? On the one hand, the use of graphic novels is seen as one strategy in teaching and encouraging literacy and literate practices; on the other hand, graphic novels are still regarded as a way station on the road to “higher” forms of literacy and to more challenging and, by implication, worthwhile texts. I’m not trying to suggest that reading comics or graphic novels exists apart from the world of word-based texts as a whole or the complex matrix of literacy acquisition. Rather, I’m simply pointing out that in the development of children’s and adolescents’ literacies, reading comics has almost always been seen as a debased form of word-based literacy, albeit an important intermediate step to more advanced forms of textual literacy, rather than as a complex form of multimodal literacy.
Comics as Multimodal Literacy: The Theory

If we think about comics as multimodal texts that involve multiple kinds of meaning making, we do not give up the benefits of word-based literacy instruction but strengthen it through the inclusion of visual and other literacies. This complex view of literacy is touched on but never fully fleshed out in two excellent recent articles on comics and education: Rocco Versaci’s “How Comic Books Can Change the Way Our Students See Literature: One Teacher’s Perspective” and Bonny Norton’s “The Motivating Power of Comic Books: Insights from Archie Comic Readers.” By situating our thinking about comics, literacy, and education within a framework that views literacy as occurring in multiple modes, we can use comics to greater effectiveness in our teaching at all levels by helping us to arm students with the critical-literacy skills they need to negotiate diverse systems of meaning making.

I’m going to offer an example of how comics engage multiple literacies by looking at Ted Naifeh’s Polly and the Pirates, but first let me give a brief outline of these multiple systems of meaning making. As texts, comics provide a complex environment for the negotiation of meaning, beginning with the layout of the page itself. The comics page is separated into multiple panels, divided from each other by gutters, physical or conceptual spaces through which connections are made and meanings are negotiated; readers must fill in the blanks within these gutters and make connections between panels. Images of people, objects, animals, and settings, word balloons, lettering, sound effects, and gutters all come together to form page layouts that work to create meaning in distinctive ways and in multiple realms of meaning making. In these multiple realms of meaning making, comics engage in what the New London Group of literacy scholars calls multimodality, a way of thinking that seeks to push literacy educators, broadly defined and at all levels of teaching, to think about literacy in ways that move beyond a focus on strictly word-based literacy. In the introduction to the New London Group’s collection, Multiliteracies: Literacy Learning and the Design of Social Futures, Bill Cope and Mary Kalantzis write that their approach “relates to the increasing multiplicity and integration of significant modes of meaning-making, where the textual is also related to the visual, the audio, the spatial, the behavioural, and so on. . . . Meaning is made in ways that are increasingly multimodal—in which written-linguistic modes of meaning are part and parcel of visual, audio, and spatial patterns of meaning” (5).

By embracing the idea of multimodal literacy in relation to comics, then, we can help students engage critically with ways of making meaning that exist all around them, since multimodal texts include much of the content on the Internet, interactive multimedia, newspapers, television, film, instructional textbooks, and many other texts in our contemporary society.

Such a multimodal approach to reading and writing asserts that in engaging with texts, we interact with up to six design elements, including linguistic, audio, visual, gestural, and spatial modes, as well as multimodal design, “of a different order to the others as it represents the patterns of interconnections among the other modes” (New London Group 25). In the first two pages from Polly and the Pirates, all of these design elements are present, including a textual and visual representation of the audio element. Despite the existence of these multiple modes of meaning making, however, the focus in thinking about the relationship between comics and education is almost always on the linguistic element, represented here by the words in the word balloons (or, in the conventions of comics, the dialogue from each of the characters) and the narrative text boxes in the first three panels (which we later find out are also spoken dialogue by a narrator present in the story).

As discussed earlier, comics are seen as a simplified version of word-based texts, with the words supplemented and made easier to understand by the pictures. If we take a multimodal approach to texts such as comics, however, the picture of meaning making becomes much more complex. In word-based texts, our interaction with words forms an
environment for meaning making that is extremely complex. In comics and other multimodal texts, there are five other elements added to the mix. Thought about in this way, comics are not just simpler versions of word-based texts but can be viewed as the complex textual environments that they are.

Comics as Multimodal Literacy: Polly and the Pirates in the Classroom

In comics, there are elements present besides words, but these elements are just as important in making meaning from the text. In fact, it is impossible to make full sense of the words on the page in isolation from the audio, visual, gestural, and spatial. For example, the first page of *Polly and the Pirates* (the first issue of a six-issue miniseries) opens with three panels of words from what the reader takes to be the story’s narrative voice. Why? Partially it is because of what the words say—how they introduce a character and begin to set up the story—but also it is because of the text boxes that enclose the words. That is, most people understand from their experiences of reading comics at some point in their history that words in text boxes almost always contain the story’s narrative voice and denote a different kind of voice than do words in dialogue balloons. What’s more, these text boxes deviate in shape and design from the even rectangles usually seen in comics; instead, they are depicted more like scrolls, a visual element that calls to mind both the time period and genre associated with pirates. Not only does this visual element help to place the reader temporally and generically, but it, along with lettering and punctuation, also aids in indicating tone, voice inflection, cadence, and emotional tenor by giving visual representation to the text’s audio element. We are better able to “hear” the narrator’s voice because we can see what words are emphasized by the bold lettering, and we associate particular kinds of voices with the narrative voice of a pirate’s tale, especially emphasized here by the shape of the text boxes. Both the visual and the audio thus influence the way we read the words in a comic, as can be seen in these three opening panels.

It seems to me, however, that the key lies in going beyond the way we make meaning from the words alone and considering the other visual elements, as well as the gestural and spatial. If I were teaching this text, I would engage students in a discussion about how they understand what is going on in the story and how they make meaning from it. Depending on the level of the class, I would stress different elements at varying levels of complexity. Here I will offer an example of how I make meaning from these pages and of some of the elements I might discuss with students.

In talking about the visual, I would consider such things as the use of line and white space, shading, perspective, distance, depth of field, and composition. The gestural refers to facial expression and body posture, while the spatial refers to the meanings of environmental and architectural space, which, in the case of comics, can be conceived as the layout of panels on the page and the relation between these panels through use of gutter space. The opening panel depicts a ship, mainly in silhouette, sailing on the ocean; we are not
given details, but instead see the looming presence of a ship that we are led to believe is a pirate ship by the words in the text boxes. The ship is in the center of an unbordered panel and is the only element in focus, though its details are obscured. The unbordered panel indicates openness, literally and metaphorically, and this opening shot thus acts much in the same way as an establishing shot in a film, orienting us both in terms of place and in terms of genre. The second panel pulls in closer to reveal a silhouetted figure standing on the deck of the ship. She is framed between the sails, and the panel's composition draws our eyes toward her as the central figure in the frame. She is clearly at home, one arm thrust forward while the other points back with sword in hand, her legs anchoring herself securely as she gazes across the ocean. The third panel pulls in even farther to a close-up of her face, the top half in shadow and the bottom half showing a slight smile. She is framed by her sword on the left and the riggings of the ship on the right, perfectly in her element, yet obscured from our view. Here and in the previous panel, gestural and visual design indicate who is the center of the story and the way in which she confidently belongs in this setting. At the same time, the spatial layout of the page and the progression of the panels from establishing shot to close-up and from unbordered panels to bordered and internally framed panels help us to establish the relationship of the woman to the ship and to the story; as we move from one panel to the next, we must make connections between the panels that are implied by the gutter. Linguistic, visual, audio, gestural, and spatial elements combine in these first three panels to set up expectations in the reader for the type of story and its narrative approach. Taken together, these elements form a multimodal system of meaning making.

What happens in the fourth panel serves to undercut these expectations as we find out that the narrative voice actually belongs to one of the characters in the story, as evidenced by the shift from text box to dialogue balloon even though the voice is clearly the same as in the first three panels of the page. Spatially, we are presented with a larger panel that is visually dominated by the presence of a book called *A History of the Pirate Queen*. This book presumably details the story to which we had been introduced in the first three panels. The character holding the book is presenting it to someone and, because of the panel's composition, is also effectively presenting it to us, the readers. The gesture becomes one of offering this story up to us, a story that simultaneously becomes a romance as well as a pirate story as evidenced by the words the character says and the way she says them (with the bold emphasis on *dream* and *marry*). At this point, we do not know who this character is or to whom she is speaking, and the answers to these questions will be deferred until we turn to the second page.

On the first panel of page 2, we see three girls, each taking up about a third of the panel, with them and the background in focused detail. Both

the words and facial expression of the first girl indicate her stance toward the story, while the words and facial expression of the second girl indicate her indignation at the attitude of the first girl (whom we learn is named Sarah). The third girl is looking to the right, away from the other two, and has a blank expression on her face. The next panel depicts the second and third girls, pulling in to a tighter close-up that balances one girl and either side of the panel and obscures the background so that we will focus on their faces and dialogue. The unbordered panel again indicates openness and momentary detachment from their surroundings. Polly is at a loss for words and is not paying attention to the other girl, as indicated by the ellipses and truncated dialogue balloons, as well as her eyes that are pointing to the right, away from the other girl. Spatially, the transition to panel 3 once more encloses them in the world that we now see is a classroom in an overhead shot that places the students in relation to the teacher. The teacher’s words restore order to the class and, on a narrative level, name the third of the three girls and the narrative voice of the opening page. The story of the pirates that began on page 1 is now contained within the world of school, and we are left to wonder how the tensions between these two stories/worlds will play out in the remaining pages. As you can see, much more than words alone is used to make meaning in these first two pages of Polly and the Pirates.

Conclusion

My process of making meaning from these pages of Polly and the Pirates is one of many meanings within the matrix of possibilities inherent in the text. As a reader, I am actively engaging with the “grammars,” including discourse and genre conventions, within this multimodal text as I seek to create/negotiate meaning; such a theory of meaning making with multimodal texts acknowledges the social and semiotic structures that surround us and within which we exist, while at the same time it recognizes individual agency and experience in the creation of meaning. Knowledge of linguistic, audio, visual, gestural, and spatial conventions within comics affects the ways in which we read and the meanings we assign to texts, just as knowledge of conventions within word-based literacy affects the ways in which those texts are read. For example, the conventions discussed above in terms of the grammar of comics would have been available to Naifeh as he created Polly and the Pirates, just as they are also available to me and to all other readers of his text. These conventions form the underlying structure of the process of making meaning, while familiarity with these conventions, practice in reading comics, interest, prior experience, and attention given to that reading all come into play in the exercise of agency on the part of the reader (and writer). Structure and agency interact so that we are influenced by design conventions and grammars as we read but are not determined by them; though we are subject to the same set of grammars, my reading of the text is not necessarily the same as that of someone else.

Reading and writing multimodal texts, then, is an active process, both for creators and for readers who by necessity engage in the active production of meaning and who use all resources available to them based on their familiarity with the comics medium and its inherent grammars, their histories, life experiences, and interests. In turn, every act of creating meaning from a multimodal text, happening as it does at the intersection of structure and agency, contributes to the ongoing process of becoming a multimodally literate person. By teaching students to become conscious and critical of the ways in which they make meaning from multimodal texts such as comics, we can also teach students to become more literate with a wide range of multimodal texts. By complicating our view of comics so that we do not see them as simply an intermediary step to more complex word-based literacy, we can more effectively help students become active creators, rather than passive consumers, of meaning in their interactions with a wide variety of multimodal texts. In doing so, we harness the real power of comics in the classroom and prepare students for better negotiating their worlds of meaning.

READWRITETHINK CONNECTION

Jacobs persuasively states the need for comics in the classroom and presents a way of using them. The ReadWriteThink lesson plan “The Comic Book Show and Tell” introduces the use of comics in the classroom. Students learn about the people involved in making comic books and learn the centrality of the script to the process. They craft comic-book scripts using clear, accurate, descriptive, and detailed writing that shows (illustrates) and tells (directs). After peers create an artistic interpretation of the script, students revise their original scripts. http://www.readwritethink.org/lessons/lesson_view.asp?id=921

Graffiti Juggles the Balls of Whimsy

But most important perhaps, graffiti nicely shows how humor varies in its tone or stance. It shows a continuum of widely-different attitudes from light to dark. This broad band extends all the way from sheer whimsy and caprice, sunny and playful, to the garden-variety comic, then on to dry wit, including parody and repparee and of course satire and irony (both heavy sarcasm and subtler understatement), and finally black humor and the grotesque and absurd, all cloudiness now... Graffiti is great for teaching about poetic and other stepped-up language. ... But foremost, graffiti’s for humor, the guffaw, the chuckle, the smile. Kids like how graffiti juggles the balls of whimsy in the air in sheer sportiveness and how it uses wit to nail a target to the wall.
