If Cornelius Plantinga is right about “The way to thrive is to help others thrive; the way to flourish is to help others flourish,” then let us march forward together to help each other to flourish. ET2022 aims at bringing enthusiasts and experts together to exchange knowledge and to complement one another to forge a better tomorrow by engineering to thrive. Engineering to Thrive 2022 encompasses all relevant topics; air, architecture, economy, energy, environment, and others. We strive to engineer clean water, food, and shelter for souls everywhere, and to do so in a manner that is in harmony with our environment. Nature-based solutions and/or ecologically-friendly developments, may they be time-tested classical wisdom or groundbreaking innovations, are equally welcome. Integrated approaches such as energy-water, food-water, water-energy-food, water-energy-food-ecosystem, water-energy-food-environment, and water-energy-food-climate nexus are particularly sought after.
